

DevOps on AWS Case Study

CloudRanger's backup service allows VOKKE to simplify, streamline and automate backup activities to provide customised and affordable solutions to clients.

About VOKKE

VOKKE

VOKKE is a custom software development company based in Melbourne, Australia. VOKKE strives to deliver the very best cloud based software to small businesses all around Australia by developing unique business processes that allow the delivery of custom, enterprise quality software for a highly competitive price.

THE CHALLENGE

VOKKE have been operating for three years and have had incredible growth over this period. As a result, a considerable amount of time was spent creating backups.

The key to their offering to clients is being able to deliver their custom software to their broad client base without compromising on security and networking best practice.

Tasks including shutting down servers, creating backups and snapshots were carried out manually or left to error-prone custom scripts.

These activities were time consuming and costly. As a result, VOKKE required a solution that allowed them to simplify, streamline and automate backup activities to provide customised and affordable solutions to clients.

THE SOLUTION

While searching online for a solution to help with their AWS snapshot management, VOKKE found CloudRanger.

CloudRanger offered the solution VOKKE were looking for by streamlining and simplifying their backup activities.

VOKKE now use CloudRanger to automatically snapshot and rotate their EBS volumes by tag, as well as terminate servers at night when workloads are low.

Adrian Grayson-Widarsito from VOKKE stresses that there is "No more cron - and no more worrying whether the cron has worked!".

THE BENEFITS

Optimise Time Spent On Backups

By streamlining and simplifying AWS backup activities, it has saved a considerable amount of time.

Automated Snapshot Management

VOKKE now have the ability to automatically snapshot and rotate their EBS volumes by tag.

Affordable & Efficient Solution

VOKKE has found this incredibly valuable as they lower costs and gain efficiency through automated tasks.

ABOUT CLOUDRANGER AND AWS

CloudRanger allows you to schedule automated backups of EBS volumes, EC2 and RDS instances. We help to automate time-consuming admin tasks, freeing you up to focus on your business.

Organizations using a DevOps model deliver applications quicker and innovate faster. AWS offers infrastructure resources designed to support continuous integration and delivery, infrastructure as code, microservices, and monitoring & logging.
